

Ahmad Ali Smairat

Full-Stack • Software Engineer

Irbid, Jordan | +962775442513 | a7madbenali@gmail.com | [Github](#) | [linkedin](#) | [Portfolio](#)

Summary

Full-Stack Software Engineer who provides end-to-end solutions for problems from integration on low-level systems to development of web apps on cloud platforms. Shown versatility of technical skills by working on different types of projects such as custom Java shells or data-oriented RESTful APIs. Uses solid problem solving and debugging abilities gained at Cisco TAC.

Education

Bachelor of Computer Engineering

Jordan University Of Science And Technology, 2020 – 2025

Experiences

Cisco TAC engineer Estarta . (sep 2025 - march 2026)

- Resolved an average of 4 networking issues weekly, preserving a 100% CSAT score.
- Diagnosed and troubleshooting Layer 2/Layer 3 protocols, reducing average ticket resolution time by 21%.
- Managed high-priority technical support cases for global clients, ensuring 99.9% network uptime through rapid incident response.

ASP .NET Developer The Hope .(may 2025 - aug 2025)

- Integrated SQL databases, boosting data-entry throughput by 30%.
- Architected and optimized ASP.NET web modules, reducing page load time by 25%.

Projects

- Custom Java-based shell ([Github](#))
 - Executed a command-line interface supporting process management and I/O redirection, improving understanding of OS kernel operations.
 - Implemented features such as I/O redirection (using > and <) to allow seamless data flow between programs, mimicking Unix-like behavior.
 - Utilized Java's ProcessBuilder and Runtime classes to handle external process execution, environment variables, and directory navigation
- Full-stack Bank management system ([Github](#))
 - Developed and designed a complete banking application where Spring Boot was used to develop a backend server providing RESTful APIs for various operations including account creation, fund transfers, and transactions.
 - Secured API endpoints through implementation of authentication and authorization using JWT (JSON Web Tokens) using a Node.js based service to manage sessions in stateless manner.

- Designed and developed a responsive front end in React.js allowing real-time updates of balance, tracking transactions, and managing accounts in a convenient way using dashboard.
 - Normalized and designed relational schemas in MariaDB to model accounts, transactions, and relationship between users and bank accounts.
 - Used layered architecture consisting of Controller, Service, and Repository layer in Spring Boot project to maintain separation of concerns.
 - Included input validation and error handling in APIs to make sure that invalid transactions are prevented.
 - Aided REST API design principles to create easily consumable REST API.
- House Price Prediction using Neural Network
 - Constructed a predictive model using Python to estimate real estate market values, attaining a 94% accuracy rate by training on a dataset of 5,000+ property records.
- Spam Filter using Machine Learning Algorithm
 - Built a text classification system to automatically identify and filter spam messages using Python.
 - Deployed and compared algorithms such as Naive Bayes or SVM, achieving an accuracy rate of over 92% in detecting spam.
- Social Network in CLI using C# ([Github](#))
 - Engineered a console-based social networking application using C# and Object-Oriented Programming (OOP) principles.
 - Developed core features such as user registration, friend requests, and post creation using Data Structures for efficient memory management.
- Computer Shop Mobile App using Flutter and firebase
 - Launched a cross-platform mobile application using Flutter for browsing and purchasing hardware components.
 - Integrated Firebase Authentication for secure user login and Cloud Firestore for real-time inventory management.
 - Implemented a "Shopping Cart" and "Order History" feature, providing a seamless UI/UX for end-users.
- App store backend with RESTful api using node.js(express) , mongoDB ([Github](#))
 - Built a scalable RESTful API using Node.js and MongoDB,

Hard Skills

- Frontend: React, Java Script, HTML, CSS
- Backend: Node.js/Express , ASP .NET, Spring boot, Spring Security
- System Design: RESTFull API, Microservices Architecture, MVC, Dependency Injection, System Optimization
- Database: Firebase, MongoDB , SQL, H2 database
- Programming Language: C/C++ ,C# ,Python , Bash Script, Java
- Version Control: Git
- Infrastructure: Docker, CI/CD, Kubernetesn
- Unit testing: Junit testing

Soft Skills

- Loyac soft skills training
- Soft Skills: Team Work , Communication , Time Management , Critical Thinking ,Problem Solving , Presentation ,Leadership , planning strategy

Certificates

- AWS Academy Graduate - AWS Academy Cloud Foundations, Amazon Academy
- leaders program training, IEEE
- CCNA: introduction to networks
- Cyber threat management
- Introduction to cybersecurity

Languages

Arabic , English

Competitions

- **Line Follower Robot**
- **JOSDC**
